
City of Kawartha Lakes: Growth with endless possibilities

UEM, in association with MHBC planning consultants, is assisting the City of Kawartha Lakes in addressing the Terms of Reference for their Municipal Master Plan Project. The initial component of this project is the development of a Growth Management Strategy to document land needs and develop an approach for the Master Plan to conform with the Ontario's Growth Plan for the Greater Golden Horseshoe and other applicable policies including the Provincial Policy Statement and the Greenbelt Plan. The second component of this Master Plan is to evaluation servicing requirements for the future growth areas which will be determined based on the Ontario "Places to Grow" legislation as well as infrastructure affordability and environmental sustainability. This comprehensive study will support the goals of the City of Kawartha Lakes to maintain a high quality of life in the future, provide for economic development, and encourage housing choices to meet the needs of Kawartha Lakes' communities. UEM's expertise in related areas of engineering is sought after and we will be working with Kawartha Lakes to provide more services that will help the city accommodate the projected growth expected in the coming years.
